## How to Find Your Bangle Size

The easiest way to find your bangle size is to decide which wrist you will wear your bangle.

Place your hand on a flat surface. Then measure between the highest points, which are the middle of the knuckle, of your first and fourth knuckles. This is your bangle size. See illustration below.

This shows the points on your knuckle you should measure between. When you measure, place your hand FLAT on a flat surface, then measure the distance between the points

If a bangle is round, you can measure around your hand with a soft tape measure.
